# Office Action Summary

Application No.

09/110,717

Applicant(s)

MILLS, RANDELL L.

Examiner

Stephen J. Kalafut

Art Unit

1745

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 13 September 2002.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-28 and 38-166 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-28 and 38-166 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.  
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
a) ☐ All b) ☐ Some \* c) ☐ None of:  
1. ☐ Certified copies of the priority documents have been received.  
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).  
\* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).  
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 25. 6) ☐ Other:

Art Unit: 1745

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/13/02 has been entered.

Claims 1-28 and 38-166, for reasons of record as applied to original claims 1-37, are rejected under 35 U.S.C. 101 because the disclosed invention is inoperative and therefore lacks utility. See paper no. 8, paragraph no. 2.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-28 and 38-166, for reasons of record as applied to original claims 1-37, are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. See paper no. 8, paragraph no. 3.

Applicant's arguments filed 9/13/02 have been fully considered but they are not persuasive.

Art Unit: 1745

Applicant argues that the articles submitted after the Final Office Action (paper no. 17) confirm a reaction which transforms atomic hydrogen from its normal ground state ( $n=1$ ) to states with lower energies, with fractional quantum numbers. Applicant calls a hydrogen atom in a lower energy state "hydrino". This is not persuasive for reasons which will be stated below.

Applicant argues that various spectral phenomena, such as extreme ultraviolet (EUV) emission lines, show the existence of hydrinos. This is not persuasive because the energies alleged by applicant do not correspond to those expected from the equation given for the hydrino energy states. According to applicant, on page 5 of the present application, the binding energy levels for a hydrogen atom are given by the equation  $\text{Binding Energy} = -13.6 \text{ eV} / (1/p)^2$ , where  $p$  is integer. Thus,  $n=1/p$ . When  $p=1$ , the hydrogen is in its ground state of  $n=1$ . Calculating the energy levels for  $p$  equaling 2, 3, and 4 would yield the values  $-13.6 \text{ eV} / (1/2)^2$ ,  $-13.6 \text{ eV} / (1/3)^2$ , and  $-13.6 \text{ eV} / (1/4)^2$ , respectively. These may be simplified to  $-13.6 \text{ eV} / (1/4)$ ,  $-13.6 \text{ eV} / (1/9)$ , and  $-13.6 \text{ eV} / (1/16)$ , and then  $-13.6 (4) \text{ eV}$ ,  $-13.6 (9) \text{ eV}$ , and  $-13.6 \text{ eV} (16)$ . When calculated fully, these would be  $-54.4 \text{ eV}$ ,  $-122.4 \text{ eV}$ , and  $-217.6 \text{ eV}$ . The energy level for  $p=5$  would be  $-340.0 \text{ eV}$ . Applicant expresses these values as multiples of  $q \times 13.6 \text{ eV}$ . The energy levels for  $p=1$  through  $p=5$  would thus respectively correspond to values for  $q$  of  $-1$ ,  $-4$ ,  $-9$ ,  $-16$  and  $-25$ . The energy transitions between  $p$  to the next higher  $p$ , starting with  $p$  going from 1 to 2, would correspond to  $q$  values of 3, 5, 7 and 9, each being an odd number. The lowest even value of  $q$  would be 8, where  $p$  goes from 1 to 3. Other possible even values of  $q$  would include 12 ( $p$  goes from 2 to 4) and 16 ( $p$  goes from 3 to 5). Thus, the  $q$  values of 2, 4 and 6 are precluded by applicant's theory, while included in applicant's observations. Conversely, applicants theory predicts the  $q$  value of 5, which is absent from the observations. It is noted that applicant has

Art Unit: 1745

asserted that the transition from the ground state to lower energy states is a non-radiative energy transfer, but then argues that these transitions are evidenced by the spectra of radiation. It is also noted that as  $p$  continues to increase, the radius of the electron orbital decreases by smaller amounts, but the energy released by each successive transition is greater, which would lead toward infinitely larger energy being produced from infinitely smaller spaces.

Applicant argues that the existence of hydrinos within plasmas is shown by Balmer line broadening. This is not persuasive because Balmer line broadening may result from a number of phenomena other than any transitions of hydrogen to a below ground energy state. According to the internet article "Stellar Spectra and the Secrets of Starlight", Balmer line broadening may occur due to turbulence or variations of pressure (pages 6 and 7). According to the internet article "Spatially and Temporally Resolved Studies in the Electron Density in Liquid Streamers by Emission Spectroscopy", Balmer line broadening may occur due to higher degrees of ionization (page 3). Since plasma is an ionized state of matter, Balmer line broadening would thus be expected to occur therein. It is also noted that for a hydrogen atom to ionize and become part of a plasma, it must have its electron removed, which would be the exact opposite of hydrino formation, since this removal would require an increase in the energy of the electron. This would also be true of naturally occurring plasmas such as the sun and other stars, which are powered by the energy arising from nuclear fusion.

Applicant argues that observations of outer space would show the existence of hydrinos. This is not persuasive because the vacuum of space has been shown to produce enlarged, rather than shrunken, hydrogen atoms. According to the internet article "Gigantic Atoms in Space", transitions between  $n=91$  and  $n=90$  have been detected (page 6). Such atoms are impossible on

Art Unit: 1745

earth, because even vacuums produced in a laboratory are too dense to allow them to survive (page 5). The emptiness of space would also make collisions between ordinary hydrogen and the types of atoms needed (according to applicant) to produce the transition to a hydrino very rare.

Applicant argues that quantum theory has “far-fetched and disproved predictions”. It is submitted that quantum theory, while containing some enigmas that remain unresolved (Tegmark *et al.*, page 69, cited in the Attachment to the Final Rejection, paper no. 17), has still been the most precisely tested and most successful theory in the history of science (Kneppler *et al.*, page 893, also cited in the Attachment to the Final Rejection). Quantum mechanics is not merely a theory, but is the basis for various inventions such as semiconductors, lasers and magnetic resonance imaging (Tegmark *et al.*, page 69). Quantum mechanics also predicts that under certain conditions, non-local (faster than light) influences are possible, and that these have been verified by experiment, according to the internet article “Hidden Variables and Relativistic Tachyons”, page 1. Applicant argues that much of his evidence has been ignored, but would have the Office overrule over 100 years of work, both theoretical and experimental, by the numerous physicists who have contributed to the science of quantum mechanics, as shown by the articles submitted with the previous two office actions, paper nos. 8 and 17.

Further evidence against applicant's theory is shown by the internet articles “Hydrinos: A State below the ground state” (Krieg) and “An Analysis of Theoretical Flaws in So-Called Classical Quantum Mechanics and of Experimental Evidence against CQM” (Zimmerman). Krieg shows through ordinary differential calculus that the ground state is a minimum, which would exhibit the Bohr radius (page 3), where  $de/dr=0$  ( $e$ =energy,  $r$ =radius). By contrast, as noted above, the energy states alleged by applicant have no minimum, but would rise to infinity

Art Unit: 1745

as  $r$  becomes infinitely smaller. Zimmerman (pages 3 and 4) discusses a problem with applicant's model of an electron moving through space as a spinning disk, with the spin axis aligned with the direction of the electron's motion. This model is shown in applicant's book *The Grand Unified Theory of Classical Quantum Mechanics*, on page 166. In a beam of electrons behaving according to applicant's theory, all moving in the same direction, all of the electrons would be polarized in this same direction. However, the electrons in observed beams are most of the time randomly polarized (Zimmerman, page 3). Thus, while randomly polarized electron beams are the normal reality, applicant's theory implies that they should not exist.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen J. Kalafut whose telephone number is (703) 308-0433. The examiner can normally be reached on M-F 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick J. Ryan can be reached on (703) 308-2383. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9310 for regular communications and (703) 872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
